Hello Michael,

I don't know if you remember, but my name is Ai-Lun and I'm a student in the Temporal Ecology Lab working with Lizzie and Ailene on her Putnum fellow project.

I followed your advice on uploading the list of accession numbers to retrieve locations from the database, and I've compiled the entries for which I'm hoping for more info in a spreadsheet attached below.

The ones highlighted in green have some details about the provenance, but I was wondering if we could pinpoint more specific locations. For the ones highlighted in red, I was unable to find any data.

If you could potentially provide suggestions on using the herbarium or other methods to find provenance data, I would deeply appreciate it!

Thank you,
Ai-Lun Fu
